

Interoffice Memorandum**To:** All Departments and Contractors Need to Dispose of Demolished Concrete**Subject:** Demolished Concrete Dump at 1W**From:** Mike Waldron**Date:** February 25, 2019

To support the site needs to occasionally dispose of demolished concrete, the Tailings Department has offered to allow dumping on the face of Tailing Storage Facility (TSF) 1 West (1W). A dump pad approximately 100' x 500' has been constructed on the face of 1W with access from the west near the West Barge site. See below for additional bullet points and maps:

- The dump is for **CONCRETE ONLY**. Concrete must be rinsed free of any acidic materials. All other materials need to be disposed of at other suitable areas, contact Environmental for guidance. Note: Tailings has opened 2 additional dumps at the west end of TSF 2 West for approved materials.
- Please dump toward the far end of the pad. Tailings will intermittently bulldoze materials over the edge into the West/East Impoundment as needed.
- The concrete dump area at 1W is considered “temporary” and may only last through year 2021 as the West/East impoundment continues to rise. At any time, if dumping concrete in this area begins to pose a concern to the TSF, Tailings will terminate the use of the area and work with Environmental and other departments to find a suitable location.
