## **BMP 309 – Oil Filled Electrical Devices**

- What are oil-filled electrical devices?  
Any electrical equipment containing oil

Examples: transformers, capacitors, oil circuit breakers, fluorescent light ballasts, reclosures, switch gear

- Oil-filled electrical devices could contain Polychlorinated Biphenyls or PCBs
- Provide all transformer information to Electrical personnel in your department
- Dispose of all used ballasts in containers marked "Used Ballasts" provided in designated Used Fluorescent Bulb accumulation areas

### ***Did you know...***

***Transformers installed inside a building require special consideration for their placement because of the potential for a catastrophic failure hazard.***
