

ENVIROGRAM

Welding Rod Management

What: Used and unusable welding rods

Who: All personnel working with welding rods or personnel working in areas where welding rods are used

Where: Used and unusable welding rods must be disposed of in a scrap metal bin

How: During your shift, place used and unusable welding rods into a metal bucket labeled “used welding rods”

When: At the end of each shift, all used and unusable welding rods must be disposed of into a scrap metal bin

Why: Welding rods may contain materials that would classify them as a hazardous waste when they are disposed of outside a scrap metal bin. Disposing of welding rods as scrap metal gives an exemption to the hazardous waste classification.
