t,

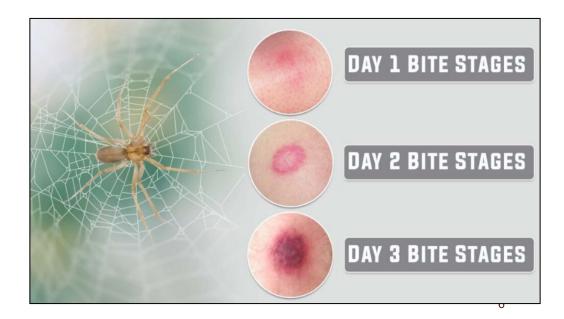

Native to the South and Central U.S. states

Safety Share -

- Two distinctive features- violin-shaped marking and six paired eyes.
- In the wild- they hide in tree cavities, and under rocks, hunt their insect prey at night. In home- behind clothes dryer, in basement stored winter coats, shoes, and woolly hats
- Webs with egg sacks in hidden-away spots can be a sign of brown recluse habitation.
- An insect-infested house can also attract them it's a ready food supply.
- Most active between March and October

- Most of the time the bites are minor and the small marks they make will fade over time
- There is a chance to experience skin damage. Although these bites are extreme, they can cause necrosis of the skin, killing tissue in area of the bite that can lead to infection.
- These spiders are especially dangerous to children, anyone with medical conditions, the immunocompromised, and the elderly
- Serious complications from brown recluse bites happen only about 10% of the time and are rarely fatal.

🏠 QUICK ТІР

Safety Share

If you know you've been bitten by a brown recluse, apply ice, elevate the bite, and seek medical attention immediately. If it's possible to do so without endangering yourself, try to bring the spider with you for identification, even if it's crushed or dead.

Symptoms

- Ache/Pain Blisters- Swelling –bruising surrounding muscles near the bite.
- Pain in your abdomen, back, chest and legs.

Severe Symptoms

- Rash Fever Dizziness Vomiting Chills.
- Restlessness or difficulty sleeping.
- If you experience any severe symptoms, seek medical attention immediately

Preventing Infestation

- Dust and vacuum your home thoroughly lay down sticky traps in areas where brown recluses generally hide
- Caulk cracks and crevices where brown recluses can enter.
- Pay attention to areas around windows, doors, vents, utility pipes.
- Solutions of apple cider vinegar, water and essential oils have limited effectiveness.
- Insecticides are most reliable way to kill brown recluse spiders.
- For your safety and that of your family, the benefits of using synthetic pesticides outweighs the risk as long as they are used as directed.

Environmental Share

Environmental Share Emergency Generators

July 2024

Limitations on Emergency Generators and Emergency Pumps

- Non-emergency run time should not exceed **50 hours** per calendar year
 - Any planned operation (i.e. maintenance or testing) counts towards this limit
- True emergency usage does not count against the 50-hour limit
 - Examples of emergencies include the loss of power from unplanned events such as: weather, downed power line, fire at a transformer, etc.
- Use during a **planned power outage** may not exceed the 50 hour limit

SAFE Fly Metal Event

THE VALUE OF COPPER

Diesel Mechanic in the Heavy-Duty Truck Shop was **installing a bearing on a steer cylinder**. The employee was **hammering it in with a ball peen hammer** with assistance from another employee. Employees were **not wearing any special PPE** for the job. While hammering the employee felt warm tingling on right arm and noticed it was blood. Pressure was applied and EMTs contacted.

Past Fly Metal Events

- HDTS pulling tracks In bay 3 -let zipper fall hit floor rail and piece of fly metal projected from grouser into employee's cheek 2 bays away
- Removing bolt of a heat exchanger at Hydromet using impact wrench – end of bolt projected into triceps of mechanic, had to be surgically removed
- While commissioning portable stacker, pressures on tracks pivoting on hard ground gouged sprockets, and eventually created a projectile, striking a person in the face above his lip. Injury required orthodontal surgery.
- While installing a pin on a shovel track using a double jack, a projectile off the pin embedded into the thigh of an employee in vicinity performing the work.

- Controls were not identified / required PPE not utilized
- Soft hammer was within reach in tool room

Standard Safety Requirements Policy

Health and Safety FCX-HS29 | Release Date 1/18/2019 | Rev 3/11/24

• Fly Metal Risks:

• Hammers 4lbs(1.81kg) and larger must be soft blow hammers that have a hardness rating of 30HRC or below. Soft blow hammers are made of materials such as soft steel, brass, bronze, copper, lead, nylon, plastic, rubber or urethane.

• Employees impacting on hardened steels shall wear body protection consisting of leather or kevlar (i.e., Hexarmor) on their legs, arms, neck and if applicable have shields in place for employee passing through the area (removal of employees in the area is suffice).

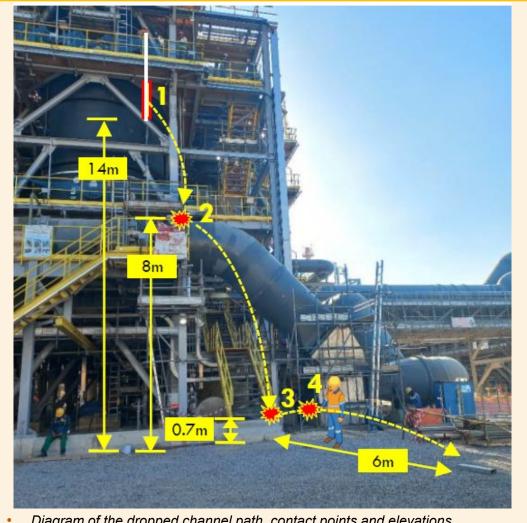

• Establish Maintenance plan for tracked equipment shoes and other wear components to reduce likelihood of fly metal. Employees should avoid line of fire areas for potential fly metal while working near moving tracked equipment (i.e., shovels, dozers, track-hoes, stackers).

Potential Fatal Event: Dropped C-channel Strikes Employee

Preliminary Incident Details		
Operation	Manyar Smelter Project	
Date / Time	June 20, 2024 / 1:30 p.m.	
Event Type	Injury - Medical Treatment	
Summary	While performing housekeeping activities, a C-channel (approximately 25 lbs) was hoisted with a 12-mm nylon rope from the third to the second level of the structure. While being hoisted, the C-channel beam became untied and fell. It bounced off the structure three times and struck the right hand of an employee who was walking before landing on the ground.	
Risk Category	Monitor – Significant (3) Likely (2)	
Findings / Missing Controls	 The area immediately below the structure was barricaded, but the beam bounced outside the exclusion zone. 	
Applicable Policies / Procedures	 Site Dropped Object Prevention Plan Site Permit to Work procedures Flagging and Barricading Policy 	
Employee Condition	 Employee suffered a contusion on the hand and a fractured finger. 	
Contact	 Zachary Scrivner, Manager-Corporate Project Engineering Safety

SAFE MATTERS Heat Stress – 6/4/24

FREEPORT FOREMOST IN COPPER

With temperatures rising, staying hydrated is important. Drink plenty of water – don't wait until you get thirsty. Gatorade also helps achieve hydration and replaces electrolytes. Avoid or reduce the amount of caffeine drinks, coffee and energy drinks as these can lead to a quicker dehydrated state. Take additional breaks if needed. Be aware of your fellow workers, especially new team members who aren't yet acclimated, as well as yourself.

Remember the water you drink today is for tomorrow

Plan ahead for a safe and productive shift. Identify cool/shaded locations for breaks. Schedule manual tasks as early as possible. Set up fans and/or misters where possible. Wear loose, lightweight, long-sleeved clothing. The FCX Heat Stress Guidelines contains additional helpful advice.

Know the symptoms of heat exhaustion:

HeadacheNausea or vomitingFaintness or dizzinessWeakness or fatigueIrritabilityThirstHeavy sweatingElevated body temperatureDecreased urine output

If you or a co-worker shows symptoms of a heat exhaustion, follow these guidelines:

- If in the field, activate a "mayday call."
- If in the townsite, call 911.

Until help arrives, do the following:

- Someone should stay with worker until help arrives.
- Remove worker from hot area and give liquids to drink.
- Remove unnecessary clothing, including shoes and socks.
- Cool the worker with cold compresses or have the worker wash head, face, and neck with cold water.
- Encourage frequent sips of cool water.

22

SAFE MATTERS CRC Duster – 6/27/24

FREEPORT FOREMOST IN COPPER

FREEPORT-MCMORAN | MORENCI OPERATIONS COMMUNICATION

PLEASE PRINT, POST AND DISTRIBUTE THE FOLLOWING INFORMATION TO EMPLOYEES IN YOUR WORK AREA WHO MAY NOT HAVE ACCESS TO E-MAIL

ALL Planners and Admins, effective immediately, please do not purchase any "CRC Duster" or chemicals requiring a SDS without consulting with Environmental Services. Chemicals requiring a SDS using a PCard is prohibited by the PCard Policy. CRC Duster specifically is no longer approved by Environmental Services due to the chemical content violating our corporate chemical policy.

If you notice any in your area, please send to the Environmental yard for proper disposal

SAFE GSC Overtime Communication

- In an effort to evaluate spend and effective immediately, all contractor overtime must be approved by a Freeport department manager. Any work outside of a contractor's normal schedule will need an email approval from a Freeport department manager prior to you providing support. You will then need to forward that approval to your site Contract Administrator or Contract Control Specialist so we can work with the department to provide funding for the additional support. Please reach out to your Contract Administrator, Contract Control Specialist or Chad Corbell if you have any questions.
- CCS Townsite Nicole Alcarez -

Thank You!
