Safety Leadership – I've got the power!

## FLAGGING / BARRICADING

### What can hurt me?

### FATAL RISKS

- ✘ Not using barriers or flagging where hazards are present but not easily seen
- ✘ Not flagging/barricading the hazard from all approaches
- ✘ Not assessing the hazard properly (example: using yellow flagging when red is more appropriate)
- ✘ Letting a hazard exist for an extended period of time
- ✘ Not giving enough information about the hazard on the tag

### What can I, you, and we do to prevent injury? CRITICAL CONTROLS

- ✓ Ensure flagging/barricading considerations are part of your risk assessment
- ✓ Never only partially flag/barricade an area – ensure all approaches are considered
- ✓ Use red flagging and barricading when medium to high hazards are present
- ✓ Only individuals with proper training and adequate PPE who are mitigating the condition are allowed inside a red flagged area
- ✓ Never leave a hazard for more than a day without re-assessment and evaluating controls. Re-establish tagging with the most current date when this evaluation is complete
- ✓ Always ensure a clear description of the hazard and contact information is listed on all tags

#### My critical behaviors:

- ✓ Assess risk appropriately
- ✓ Fill tags out completely
- ✓ Flag/barricade from all approaches
- ✓ Re-evaluate hazard each day and update tag

#### Red Flags:

- ✓ No warnings present in hazardous area
- ✓ Not enough information on the tag
- ✓ All approaches not flagged/barricaded
- ✓ Yellow flagging used in high risk area
- ✓ No re-assessment of hazard after each day

**When in doubt, ask your Supervisor or Lead. Never just wing it!**
